Table of contents

01 **Introduction**
What depth perception is and why it's important

02 **Depth illusions**
How misleading cues can trick our brain

03 **Types of depth cues**
The three main cues

04 **Activity & Quiz**
Interactive class activity and short quiz

01

Introduction

Depth Perception

What?

Is the ability to see the world in three dimensions and to judge the distance of objects accurately.

Why?

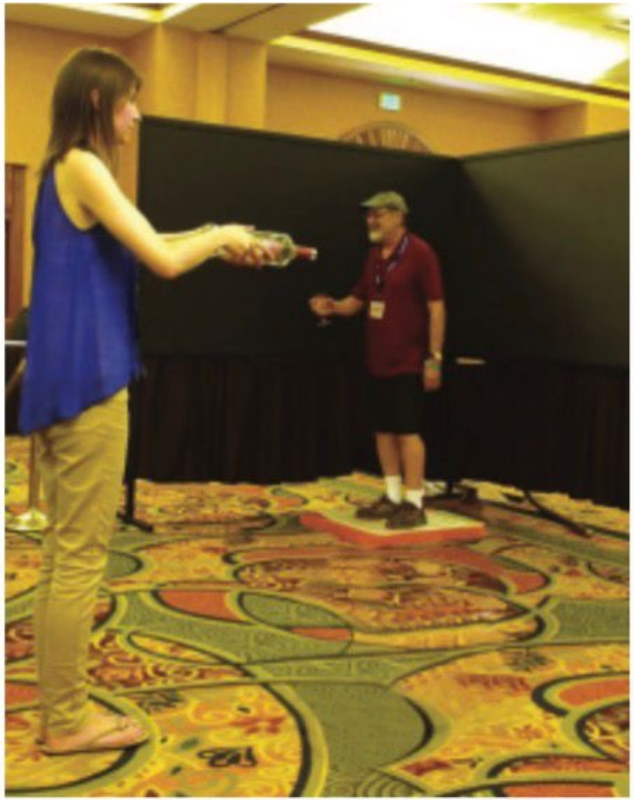
It allows us to understand how far things are, how deep or high they appear and how objects relate to one another in space.

02

Depth Illusions

Misleading Cues

(a)

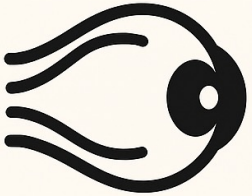


(b)

Peter Thompson

03

Types of Depth cues

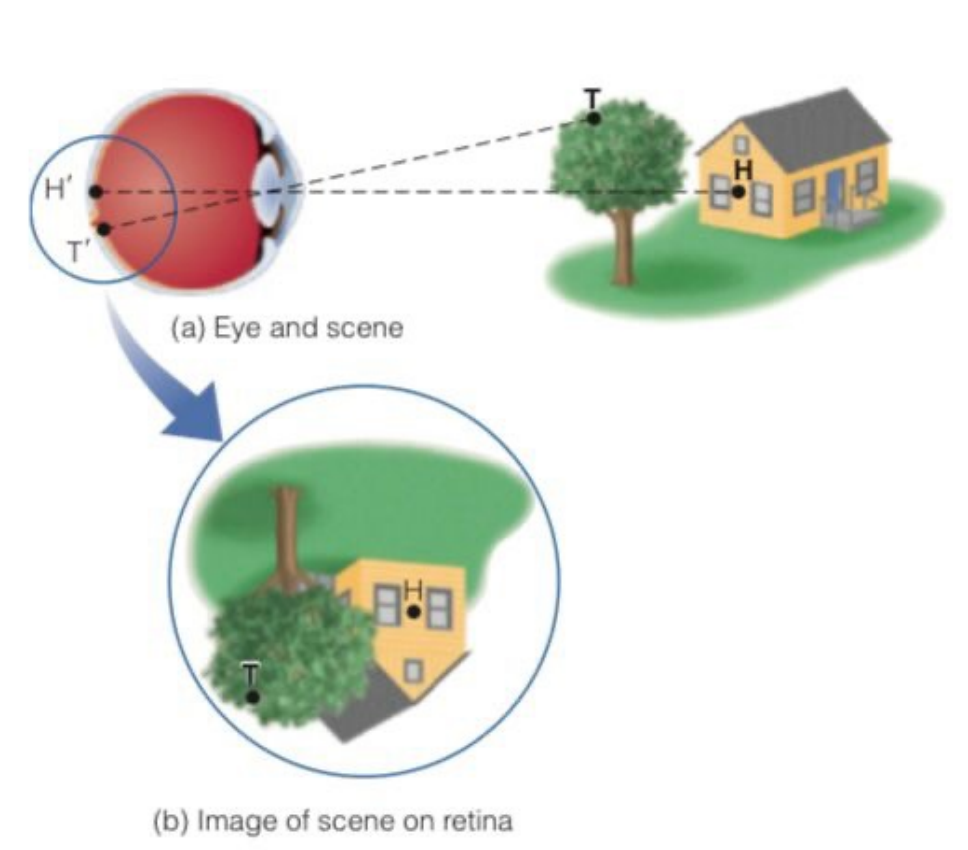


OCULOMOTOR

MONOCULAR

BINOCULAR

How the eye sees depth



Why Depth Perception matters

-Allows 3D drawings, photography, and VR

-Helps us move safely and interact with the world

-Explains why optical illusions work

Quiz!!

What do we call the signals that help us judge distance and depth?

A) Color cues

B) Depth cues

C) Motion cues

Which cue depends on both eyes?

A) Monocular

B) Binocular

C) Oculomotor

When one object partially covers another, What cue is used?

A) Occlusion

B) Convergence

C) Accomodation

What happens if depth cues are misleading?

A) We see an illusion

B) We lose focus

C) We stop seeing depth

What part of the eye receives the 2D image of world?

A) Lens

B) Retina

C) Iris

Thanks!
